# Project Report

*Introduction to version control*

PROJECT TITLE :

PERSONAL PORTFOLIO WEBSITE

*Name: Chandana D*

*USN:1RUA25BCA0016*

*Course: BCA(HONS)*

# *1. Purpose of the Project*

*The purpose of this project is to design and develop a **personal portfolio website** that showcases an individual's profile, projects, achievements, and contact details in an interactive and visually appealing way.*

*This project demonstrates the use of **HTML, CSS, and JavaScript** to create a responsive and user-friendly website. The goal is to build a digital identity where visitors can learn about the creator's work, skills, and interests.*

*The website also highlights modern web design concepts such as:*

- *Responsive layouts*
- *Interactive UI components*
- *Smooth navigation*
- *Dynamic content using JavaScript*

*This project helps in understanding **frontend web development concepts** and how to combine design with functionality.*

# 2. Functionalities of the Website

*The portfolio website contains several useful features:*

## 1. Navigation Bar

*A sticky navigation bar allows users to easily move between different sections such as:*

- *About Me*
- *Projects*
- *Hobbies*
- *Achievements*
- *Contact*

## 2. Profile Section

*The homepage contains:*

- *Profile image*
- *Welcome message*
- *Personal tagline*
- *Interactive* ***Mood Button*** *that changes background and text.*

## 3. About Section

*This section introduces the user and describes their interests, skills, and creative journey.*

### *4. Projects Section*

*Displays a list of projects developed by the user.*

*An **automatic slideshow** shows project related images to make the page more visually engaging.*

### *5. Hobbies Section*

*A structured **table layout** displays hobbies and explains why they are interesting.*

### *6. Achievements Section*

*Another styled table presents achievements and recognitions along with the year.*

### *7. Contact Section*

*Users can connect through:*

- *Email*
- *LinkedIn*
- *GitHub*

### *8. Interactive Features Added*

*The website includes dynamic JavaScript features:*

- *Image slideshow*
- *Mood changer button*
- *Smooth scrolling navigation*
- *Hover animations*
- *Responsive design*

*These features improve user experience and make the website interactive.*

---

# 3. Demonstration of Code

*Below are examples of important code components used in the project.*

## HTML Structure

*The website structure is built using HTML elements such as:*

```
<header>
  <h2>Hello, I'm Chandana</h2>
  <h1>Welcome to My Creative Space</h1>
</header>
```

*Sections are organized using semantic tags like:*

```
<section id="about">
<h2>About Me</h2>
<p>Information about the user.</p>
</section>
```

*This helps maintain a clear and readable structure.*

---

## *CSS Styling*

*CSS is used to create a modern visual design including gradients, glass effects, and animations.*

*Example:*

```
Body {
background:lineargradient (135deg,#fbc2eb,#a6c1ee);
font-family: 'Poppins', sans-serif;
}
```

*The project also uses:*

- *Hover effects*
- *Table styling*
- *Rounded components*
- *Glassmorphism UI*

---

## *JavaScript Functionality*

*JavaScript adds dynamic behavior to the website.*

*Example:* ***Image Slideshow***

```
const slides =
document.querySelectorAll('.slideshow img');
let index = 0;

function showNextSlide(){
slides[index].classList.remove('active');
index = (index + 1) % slides.length;
slides[index].classList.add('active');
}

setInterval(showNextSlide,3000);
```

*Example:* ***Mood Button***

```
moodBtn.addEventListener('click',()=>{
document.body.style.background= gradients[mood];
tagline.textContent = messages[mood];
});
```

*These scripts make the page interactive.*

## 4. Frontend View and Components

*The frontend interface of the website includes the following components:*

### *Homepage*

*Displays profile image, welcome message, and interactive controls.*

### *Navigation Bar*

*Provides easy access to all sections of the website.*

### *Project Gallery*

*Contains a slideshow of project images.*

### *Tables*

*Used to display hobbies and achievements in a structured format.*

### *Contact Buttons*

*Clickable buttons redirect users to email, LinkedIn, and GitHub.*

*The design uses **modern UI techniques** such as gradients, shadows, hover effects, and responsive layouts to improve the user experience.*

# 5. Conclusion

*This project demonstrates how HTML, CSS, and JavaScript can be used together to create a professional and interactive personal website.*

*The project successfully implements various frontend concepts including responsive design, animations, navigation systems, and dynamic content. It also serves as a foundation for building more advanced web applications in the future.*
